

Vishal Kesharwani

Backend / DevOps Engineer

Summary

Backend engineer with hands-on production experience across Java/Spring Boot APIs and cloud infrastructure automation. Built and deployed event-driven microservices on Kubernetes, provisioned infrastructure via Terraform, and automated AWS resource management with Python/boto3. Comfortable owning a system end-to-end — from REST API design to CI/CD delivery to production monitoring. AWS Certified Cloud Practitioner with a perfect score.

Work Experience

SteepGraph Systems Pvt. Ltd.

Backend Developer Intern

Feb 2026 – Jun 2026

Pune, India

- Designed and developed 15+ production-grade REST APIs using Java, Spring MVC, and PostgreSQL for large-scale enterprise applications, secured via Spring Security; managed builds with Gradle.
- Optimized ETL validation via debouncing logic, cutting redundant database lookups by 50%, and built a real-time SQL table extractor auto-suggesting table names from live DB metadata.
- Maintained and fixed bugs across 10+ modular service-layer components; reviewed merge requests and contributed to enterprise data migration pipelines.
- Built an ARAS-to-email bridge as a side project, integrating with the ARAS PLM platform to route and deliver item data through automated email notifications.

SortUs

Cloud & DevOps Intern

Jun 2025 – Aug 2025

Pune, India (Remote)

- Automated serverless deployments via AWS Lambda and GitHub Actions in a real production workflow, cutting manual release effort by an estimated 30%.
- Built scalable Node.js and MongoDB backend modules and documented REST APIs for frontend-backend integration.

Projects

Seva Mahila Udyog – Food Business Management App

Live in production

- Built a full-stack order-management platform (60+ customers, 45+ REST endpoints across 13 domain modules) handling live payments, order lifecycle, and admin operations for a home-food business.
- Implemented secure, stateless authentication using JWT and bcrypt-hashed, expiring OTPs, with rate limiting and two-factor admin authentication for privileged operations.
- Found and fixed a critical payment-integrity bug via server-side validation, preventing overpayment and ledger inconsistencies.

Job Application Tracker – Event-Driven Microservices Platform

github.com/vishal-kesharwani/JOB-APPLICATION-TRACKER

- Designed 3 independent Spring Boot microservices communicating exclusively via Kafka events, deployed to Kubernetes with liveness/readiness probes; verified self-healing under pod failure and autoscaling under load.
- Provisioned infrastructure as code using Terraform for AWS EKS; delivered via ArgoCD GitOps with automatic Git-to-cluster reconciliation and full observability (Prometheus, Grafana).
- Secured inter-service communication with JWT-based authentication and Spring Security, and managed schema evolution across services using Flyway migrations.

Knowledge Nexus – Full-Stack Mentorship Platform

github.com/vishal-kesharwani/NEXUS

- Architected a full-stack mentorship platform with JWT/OAuth2 authentication, supporting mentor discovery, session booking, and real-time chat via WebSocket.
- Built scalable REST APIs using Spring Boot and Spring Data JPA with automated Google Calendar scheduling; containerized the full stack via Docker Compose.
- Engineered a Kafka-based event-driven notification system to decouple the mentorship request lifecycle from notification delivery, keeping the booking flow responsive under load.

CloudLens-AI – AWS/Terraform Architecture Review & Billing Suggestion Platform

github.com/vidya-bingi-26/cloudlens-ai

- Owned the backend end-to-end — core services, database models with Alembic migrations, and API routes — for a platform reviewing AWS Terraform infrastructure and surfacing billing/cost optimization suggestions.
- Built 6 core backend modules (parser, pipeline, pricing, reviewer, rules, schemas) for the review engine analyzing Terraform configs and pricing.

Skills

Languages

- Java
- Python
- C++
- SQL

Backend & Security

- Spring Boot / Spring MVC
- REST APIs
- Spring Security
- JWT / OAuth2
- Flyway (DB Migrations)

Cloud

- AWS (EC2, Lambda, IAM)
- Terraform
- Kubernetes

DevOps & Tools

- Docker
- Git / CI/CD
- GitHub Actions
- Prometheus / Grafana

Databases

- PostgreSQL / MySQL
- Alembic (DB Migrations)
- MongoDB

Core CS

- Data Structures & Algorithms
- System Design
- OOP / SOLID

Education

MIT Academy of Engineering, Pune

B.Tech, Computer Engineering

2022 – 2026

CGPA: 8.63 / 10

Other

Certification

- AWS Certified Cloud Practitioner (CLF-C02) – 1000/1000

Achievements

- Smart India Hackathon 2024 – Grand Finalist
- Flipkart Grid 7.0 – Round 2 (Ranked 1582/10,000+)

Leadership

- Core Member & Design Lead, ACM Student Chapter

Competitive Programming

- 80+ problems solved on LeetCode (Java)
